Helium Cryogenics (International Cryogenics Monograph Series)

Steven W. Van Sciver

Helium Cryogenics (International Cryogenics Monograph Series) Steven W. Van Sciver

Twenty five years have elapsed since the original publication of *Helium Cryogenics*. During this time, a considerable amount of research and development involving helium fluids has been carried out culminating in several large-scale projects. Furthermore, the field has matured through these efforts so that there is now a broad engineering base to assist the development of future projects.

Helium Cryogenics, 2nd edition brings these advances in helium cryogenics together in an updated form. As in the original edition, the author's approach is to survey the field of cryogenics with emphasis on helium fluids. This approach is more specialized and fundamental than that contained in other cryogenics books, which treat the associated range of cryogenic fluids. As a result, the level of treatment is more advanced and assumes a certain knowledge of fundamental engineering and physics principles, including some quantum mechanics.

The goal throughout the work is to bridge the gap between the physics and engineering aspects of helium fluids to provide a source for engineers and scientists to enhance their usefulness in low-temperature systems.

Dr. Van Sciver is a Distinguished Research Professor and John H. Gorrie Professor of Mechanical Engineering at Florida State University. He is also a Program Director at the National High Magnetic Field Laboratory (NHMFL). Dr. Van Sciver joined the FAMU-FSU College of Engineering and the NHMFL in 1991, initiating and teaching a graduate program in magnet and materials engineering and in cryogenic thermal sciences and heat transfer. He also led the NHMFL development efforts of the cryogenic systems for the NHMFL Hybrid and 900 MHz NMR superconducting magnets. Between 1997 and 2003, he served as Director of Magnet Science and Technology at the NHMFL. Dr. Van Sciver is a Fellow of the ASME and the Cryogenic Society of America and American Editor for the journal *Cryogenics*. He is the 2010 recipient of the Kurt Mendelssohn Award.

Prior to joining Florida State University, Dr. Van Sciver was Research Scientist and then Professor of Nuclear Engineering, Engineering Physics and Mechanical Engineering at the University of Wisconsin-Madison from 1976 to 1991. During that time he also served as the Associate Director of the Applied Superconductivity Center. Dr. Van Sciver received his PhD in Low Temperature Physics from the University of Washington-Seattle in 1976. He received his BS degree in Engineering Physics from Lehigh University in 1970.

Dr. Van Sciver is author of over 200 publications and patents in low temperature physics, liquid helium technology, cryogenic engineering and magnet technology. The first edition of *Helium Cryogenics* was published by Plenum Press (1986). The present work is an update and expansion of that original project.

From reader reviews:

James Brown:

Information is provisions for those to get better life, information presently can get by anyone with everywhere. The information can be a know-how or any news even a concern. What people must be consider whenever those information which is in the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one the resource are convinced. If you get the unstable resource then you understand it as your main information it will have huge disadvantage for you. All those possibilities will not happen throughout you if you take Helium Cryogenics (International Cryogenics Monograph Series) as your daily resource information.

Gerri Pettit:

Reading a book tends to be new life style in this particular era globalization. With looking at you can get a lot of information that will give you benefit in your life. With book everyone in this world may share their idea. Guides can also inspire a lot of people. Plenty of author can inspire their particular reader with their story as well as their experience. Not only the storyline that share in the guides. But also they write about advantage about something that you need case in point. How to get the good score toefl, or how to teach your children, there are many kinds of book that you can get now. The authors nowadays always try to improve their ability in writing, they also doing some exploration before they write to the book. One of them is this Helium Cryogenics (International Cryogenics Monograph Series).

Tara Huber:

A lot of people always spent their very own free time to vacation or go to the outside with them family members or their friend. Are you aware? Many a lot of people spent that they free time just watching TV, or maybe playing video games all day long. If you need to try to find a new activity here is look different you can read a book. It is really fun to suit your needs. If you enjoy the book that you just read you can spent the entire day to reading a publication. The book Helium Cryogenics (International Cryogenics Monograph Series) it is quite good to read. There are a lot of people who recommended this book. These folks were enjoying reading this book. If you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore easily to read this book from a smart phone. The price is not to fund but this book possesses high quality.

Lindsay Washington:

That e-book can make you to feel relax. This particular book Helium Cryogenics (International Cryogenics Monograph Series) was bright colored and of course has pictures on the website. As we know that book Helium Cryogenics (International Cryogenics Monograph Series) has many kinds or variety. Start from kids until young adults. For example Naruto or Private eye Conan you can read and think you are the character on there. Therefore not at all of book are usually make you bored, any it offers up you feel happy, fun and chill

out. Try to choose the best book to suit your needs and try to like reading which.
