FutureScience: Forbidden Science of the 21st-century Maurice M. Cotterell

FUTURESCIENCE--forbidden science of the 21st-century

You can be forgiven for believing that Isaac Newton discovered the force that makes apples fall to the ground, but he did not. He simply gave the force (F) a name (Gravity) and noted that the strength of the force, whatever it might be, depends upon the size of the apple (which he referred to as mass 1, m_1) and the size of the Earth (Mass 2, M_2). He also figured-out that the strength of the force on the apple depends on how far away the apple is from the Earth to begin with and noted, like Galileo before him, that as an apple falls it speeds-up and travels faster and faster until it hits the ground. At first, Newton set-down the relationship between the force and the masses in a shorthand way (a formula) saying that F (the strength of the force) could be found by multiplying m_1 by M_2 and then by dividing the result by the distance (between them) squared (d^2). There was just one problem; every time he did the calculation he finished up with the wrong answer. He eventually discovered that the only way to get the right answer was to multiply the wrong answer by '667 billionths'. He did not know where this tiny amount of force came from but, just like he had done with Gravity, he gave the mysterious number a name--the Gravitational Constant, 'G'; making his final formula for the force, $F = G \times m_1 \times M_2/d^2$. It is hard to believe that since then, for more than 350 years, still no-one understands what gravity is or what causes it or why we have to multiply the wrong answer by G to get the right one. And to this day no-one understands what G is or even where it comes from. That's how sophisticated we are. No-one understands why objects fall to the ground. The second most-embarrassing problem for modern Science is that no-one understands why the positive charges inside the middle of atoms simply do not just spring apart (see the illustration), which is what you would expect given that positive repels positive. To overcome the contradiction physicists decided that the positive charges must in some way be glued-together and so for the past 75 years have been searching for the glue or, more precisely, more than 300 types of glue--but have yet to find any. And no-one understands (given that positive attracts negative) why the orbiting negative electrons inside atoms do not simply get sucked into the positive bits in the middle of the atom. They just 'cannot understand it'. When you place a magnet on the refrigerator-door you probably imagine that scientists understand how a magnet actually works, but they do not; as far as they are concerned it seems to work by magic so they gave it the name magnet. Switch on the light and you no doubt take-it-for-granted that the people who supply the electricity understand how it works, but they do not; physicists are pretty-sure that an electrical current is in fact simply the movement of atomic negative charges along a wire. The problem is that no-one understands why, whenever a current flows, a magnetic field appears around the wire. When they look skywards, at night, astro-physicists cannot understand what makes the stars cluster together into galaxies, because their calculations contradict what their eyes can see. To overcome this they say that there must be other sources of gravity out there, like planets and dust, that cannot be seen, because it is dark. So they named their fantasy planets 'dark matter', at least for the time-being; until they can figure-out why their calculations do not make sense. And they cannot understand why stars spiral into galaxies, but cling to the hope that when (or if) they ever understand how gravity actually works that the reason for the double-spiral of galaxy formation will become clear. FUTURESCIENCE explains, in a simple way, how Electricity and Magnetism work at atomic level and how they work together to produce the force of Gravity and in so doing reveals the underlying science behind Newton's equation that he tried in vain to uncover--the reason why Gravity is proportional to the masses of two attracting objects, why it grows weaker in proportion to the square of the distance between them and the nature of the mysterious 'Gravitational Constant' that continues to perplex researchers to this day. It explains why all objects accelerate to Earth at 32 feet per second, every second. It explains why the atom is comprised of 8 orbital shells and why the shells

fill with electrons the way that they do. It explains: The nature of so-called 'dark matter'; the reason why spiral galaxies are spiral shaped; why the centre of the Earth is boiling-hot; how the Earth's magnetic field is generated; how to generate gravity waves; how gravity waves can be used to produce unlimited quantities of free energy; how to generate antigravity waves; how antigravity waves can be used to de-couple hydrogen bonds in water to separate hydrogen from oxygen to provide unlimited supplies of free hydrogen to fuel hydrogen powered cars; and, how antigravity radiation can be used to cause the disintegration of matter in water and living tissue (phasor weapons technology). The book goes on to explain the cause of the Sunspot cycle and how the Sun affects life on Earth: The cause of global-warming-and-global-cooling; how the 28-day spinning Sun regulates fertility in females; how the Sun's radiation causes 12 types of genetic mutations that result in 12 types of personality (sun-sign Astrology); how sunspots cause schizophrenia; how the Sun controls bio-rhythms and our day-to-day behaviour; how the Sun causes catastrophe cycles and the rise and fall of civilizations, and; how mobile phones and power lines cause cancer. The second half of the book--the 'science of God'--explains what God is made of and how and why God created the physical Universe. The reasons why we live, why we die and why this has to be are explained using scientifically scrutinized pictures of God and Jesus decoded from the treasures of ancient sun-worshipping civilizations. Other pictures follow the journey of the soul as it moves from this World to the next. FUTURESCIENCE is aimed at the general reader with no prior knowledge of Science and uses many illustrations to convey the concepts simply and concisely.

From reader reviews:

Mary Williams:

Have you spare time for the day? What do you do when you have more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent their very own spare time to take a walk, shopping, or went to the actual Mall. How about open as well as read a book eligible FutureScience: Forbidden Science of the 21st-century? Maybe it is to be best activity for you. You recognize beside you can spend your time along with your favorite's book, you can wiser than before. Do you agree with it has the opinion or you have various other opinion?

Matthew McDaniel:

This FutureScience: Forbidden Science of the 21st-century usually are reliable for you who want to certainly be a successful person, why. The reason why of this FutureScience: Forbidden Science of the 21st-century can be among the great books you must have is usually giving you more than just simple looking at food but feed anyone with information that maybe will shock your before knowledge. This book is actually handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed types. Beside that this FutureScience: Forbidden Science of the 21st-century forcing you to have an enormous of experience including rich vocabulary, giving you tryout of critical thinking that we realize it useful in your day activity. So , let's have it and revel in reading.

Dustin Kellett:

A lot of reserve has printed but it takes a different approach. You can get it by web on social media. You can choose the top book for you, science, witty, novel, or whatever by searching from it. It is called of book FutureScience: Forbidden Science of the 21st-century. You can include your knowledge by it. Without causing the printed book, it may add your knowledge and make you happier to read. It is most important that, you must aware about e-book. It can bring you from one place to other place.

Juan Hinkson:

What is your hobby? Have you heard that question when you got pupils? We believe that that issue was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. And also you know that little person like reading or as examining become their hobby. You need to understand that reading is very important in addition to book as to be the matter. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You will find good news or update about something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them is this FutureScience: Forbidden Science of the 21st-century.
