Offshore Site Investigation and Foundation Behaviour: Papers presented at a conference organized by the Society for Underwater Technology and held in ... Ocean Science and Offshore Engineering)

Two main areas of offshore activity are addressed in this book:

- Site investigation on assessment; and
- Applications and foundation engineering.

The 37 contributions from a wide ranging group of international experts, are resulting from the Offshore Site Investigation and Foundation Behaviour Conference, London, U.K., September 1992.

Adequate determination of site conditions can only be achieved by the integrated approach of using geological, geophysical and geotechnical data.

Developments in data acquisition techniques are illustrated through case histories in the section on Geotechnical Sampling and Testing.

In the section on Advanced Interpretation Techniques and Integrated Interpretations the state of the art of these topics is also illustrated by case histories.

A review of foundation behaviour is presented in the section on Gravity Foundations, Foundation Performance Monitoring, Piling Research and Design Criteria. These topics are illustrated in the light of field experience and recent research, in particular that involving full-scale tests and monitoring.

This book provides many illustrative figures and much pertinent information to exploration and marine geophysicists, petroleum and offshore engineers and for researchers working these fields.
