**Topological Library: Part 1: Cobordisms and Their Applications (Series on Knots and Everything) (Series on Knots and Everything (Hardcover))** S. P. Novikov, I A Taimanov

This is the first of three volumes collecting the original and now classic works in topology written in the 50s 60s. The original methods and constructions from these works are properly documented for the first time in this book. No existing book covers the beautiful ensemble of methods created in topology starting from approximately 1950, that is, from Serre's celebrated Singular homologies of fibre spaces. This is the translation of the Russian edition published in 2005 with one entry (Milnor's lectures on the h-cobordism) omitted.
