Stellar Spectral Classification (Princeton Series in Astrophysics)

Richard O. Gray, Christopher J. Corbally

Stellar Spectral Classification (Princeton Series in Astrophysics) Richard O. Gray, Christopher J. Corbally

Written by leading experts in the field, *Stellar Spectral Classification* is the only book to comprehensively discuss both the foundations and most up-to-date techniques of MK and other spectral classification systems. Definitive and encyclopedic, the book introduces the astrophysics of spectroscopy, reviews the entire field of stellar astronomy, and shows how the well-tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics.

The book begins with a historical survey, followed by chapters discussing the entire range of stellar phenomena, from brown dwarfs to supernovae. The authors account for advances in the field, including the addition of the L and T dwarf classes; the revision of the carbon star, Wolf-Rayet, and white dwarf classification schemes; and the application of neural nets to spectral classification. Copious figures illustrate the morphology of stellar spectra, and the book incorporates recent discoveries from earth-based and satellite data. Many examples of spectra are given in the red, ultraviolet, and infrared regions, as well as in the traditional blue-violet optical region, all of which are useful for researchers identifying stellar and galactic spectra. This essential reference includes a glossary, handy appendixes and tables, an index, and a Web-based resource of spectra.

In addition to the authors, the contributors are Adam J. Burgasser, Margaret M. Hanson, J. Davy Kirkpatrick, and Nolan R. Walborn.

From reader reviews:

Teresa Hunter:

The book Stellar Spectral Classification (Princeton Series in Astrophysics) can give more knowledge and also the precise product information about everything you want. So just why must we leave the best thing like a book Stellar Spectral Classification (Princeton Series in Astrophysics)? Some of you have a different opinion about e-book. But one aim that will book can give many facts for us. It is absolutely correct. Right now, try to closer together with your book. Knowledge or info that you take for that, you could give for each other; you could share all of these. Book Stellar Spectral Classification (Princeton Series in Astrophysics) has simple shape nevertheless, you know: it has great and massive function for you. You can search the enormous world by start and read a guide. So it is very wonderful.

Raymond Bailey:

The knowledge that you get from Stellar Spectral Classification (Princeton Series in Astrophysics) is the more deep you searching the information that hide in the words the more you get considering reading it. It doesn't mean that this book is hard to understand but Stellar Spectral Classification (Princeton Series in Astrophysics) giving you buzz feeling of reading. The copy writer conveys their point in a number of way that can be understood simply by anyone who read this because the author of this book is well-known enough. This book also makes your own vocabulary increase well. Making it easy to understand then can go together with you, both in printed or e-book style are available. We propose you for having that Stellar Spectral Classification (Princeton Series in Astrophysics) instantly.

Gary Muldowney:

Typically the book Stellar Spectral Classification (Princeton Series in Astrophysics) has a lot associated with on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. Tom makes some research ahead of write this book. This particular book very easy to read you may get the point easily after scanning this book.

Elda Ornelas:

Are you kind of active person, only have 10 as well as 15 minute in your time to upgrading your mind talent or thinking skill even analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your limited time to read it because this time you only find reserve that need more time to be go through. Stellar Spectral Classification (Princeton Series in Astrophysics) can be your answer mainly because it can be read by a person who have those short time problems.
