E D E X (Alprostadil): Indicated for the Treatment of Erectile Dysfunction or Sexual Impotence or Inability to Get or Keep an Erection in Men James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.” EDEX (alprostadil) injection and suppositories are used to treat certain types of erectile dysfunction (sexual impotence; inability to get or keep an erection) in men due to neurogenic, vasculogenic, psychogenic, or mixed etiology. EDEX injection is also sometimes used in combination with other tests to diagnose erectile dysfunction. Alprostadil is in a class of medications called vasodilators. It works by relaxing the muscles and blood vessels in the penis to keep enough blood in the penis so that an erection can occur. Alprostadil does not prevent pregnancy or the spread of sexually transmitted diseases such as human immunodeficiency virus (HIV). This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—EDEX. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
